GUIDELINES FOR CLIPPER SHAVE PASS		

PURPOSE: To provide guidance in situations in which a medical determination contradicts shaving.

POLICY: Clipper shave passes are issued to offenders when medically indicated.

PROCEDURES:

- I. Medical providers may issue a clipper shave pass to an offender when the following medical condition is present in the hair follicle:
 - A. Infection and/or micro abscess formation consistent with acute pseudofolliculitis barbae.
 - B. Evidence of scar tissue resulting from pseudofolliculitis barbae as determined by visual inspection of the beard area.
- II. In the event pseudofolliculitis barbae is diagnosed, a vigorous program of infection control must be instituted.
- III. The clipper shave pass indicates that the offender does not have to shave, but must keep his facial hair clipped to no more than one-fourth inch in length.
- IV. The clipper shave pass for pseudofolliculitis barbae is valid for the duration of incarceration, unless revoked by a provider determining the condition no longer warrants the pass.
- V. A temporary clipper shave pass should be issued for conditions other than pseudofolliculitis that are not thought to be permanent conditions.
- VI. A list of offenders who require a clipper shave pass will be maintained by the facility health services department.
- VII. The final authority as to whether a clipper shave pass is medically indicated is the medical director of the offender's current facility of assignment.
